ABSTRACT

It has been documented that on the national level there are more teachers looking for jobs than there are positions available. According to a number of national surveys, the number of persons preparing to become teachers has decreased in recent years. A survey of Arkansas institutions of teacher education compared statistics of the number of teachers prepared by sixteen schools of education in 1977 and the projected estimates of how many will be prepared in 1978. While all categories of teachers with the exception of female elementary teachers are expected to show some decrease from 1977 to 1978, some categories are expected to decrease much more than others. The largest decreases expected are in the area of secondary school teachers, particularly males. The sharpest drop in teacher preparation is projected to be in for males in special education.

THE SUPPLY OF TEACHERS FROM ARKANSAS INSTITUTIONS, 1977 and 1978

by

Jerry H. Robbins

It is well documented that, at least on the national level, there are more teachers looking for jobs than there are positions available. At least partly because of this surplus of teachers, the number of persons preparing to become teachers has decreased in recent years, according to a number of national surveys.

Is the number of persons prepared to become teachers decreasing among the Arkansas teacher education institutions? If there is a decrease, is it occurring evenly among all Arkansas institutions or are some institutions more affected than others? If so, is the decrease occurring evenly across major categories?

Source of Data

Each year each of the sixteen teacher education institutions submits to the Arkansas Department of Education TS & D Form I, "Report of the New Supply of Instructional Personnel." This form asks for the "number of students completing preparation for standard teaching certificates for the first time," classified by elementary school, secondary school, and special education. The forms which were submitted to the Department of Education in the spring of 1978 included actual figures for the 1977 academic year and estimated figures for the 1978 year.

Each of the sixteen institutions was asked to furnish to the author a copy of the form that had been submitted to the Department of Education. Eleven of the institutions provided this information. Henderson State University provided instead a copy of the "Placement Service Annual Report." From this document, calculations were made for the 1977 data for Henderson State University, but there were no data for 1978.

After several requests did not produce the forms from the remaining four institutions, the Department of Education was asked for copies of the forms from these institutions and they were supplied. In summary, the data in this report were taken directly from the TS & D Form I reports submitted by the institutions, with the one exception.

Total Number of Teachers

In 1977, 2431 teachers were prepared by the sixteen Arkansas teacher education institutions. For 1978, fifteen of the institutions estimated that 1995 teachers would be prepared. (See Appendix) Excluding the data from Henderson State University, this indicates a decrease of 9.4% in the supply of teachers in the one year.

However, the decrease is not spread evenly among all institutions, and in fact, six of the institutions estimate that the number of teachers prepared will increase from 1977 to 1978. Table 1 gives the percentage of increase or decrease expected from 1977 to 1978 for each institution.

Table 1.

Percentage of Increase or Decrease in Total
Number of Teachers Prepared, Arkansas Institutions,
1977 to 1978 (est.)

<u>Institution</u>	<u>Change</u>
1. Arkansas College	+60.0%
2. University of Arkansas at Little Rock	+22.6%
3. Philander Smith College	+ 8.9%

	Total	2431		Total	1995

The University of Arkansas is the state's largest teacher education institution, and other large programs are found at Arkansas State University, and the University of Central Arkansas. Harding College and Ouachita Baptist University are the two largest non-public teacher education institutions.

In general, the institutions retained about the same relative position with respect to each other, with the exception of the University of Arkansas at Pine Bluff, which is estimated to move from 7th largest to 4th largest, Henderson State University not considered. The University of Central Arkansas expects to be

the second largest teacher education institution in 1978.

Total Number of Elementary Teachers

The number of elementary teachers prepared is estimated to decrease only 0.4%, disregarding data from Henderson State University. Table 3 gives the total number of elementary teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

The University of Central Arkansas, Arkansas State University, and the University of Arkansas are the largest producers of elementary teachers. About 40% of all elementary teachers come from these three institutions.

In general, the institutions retained about the same relative position with respect to each other, with the exception of Arkansas Tech University which moved up in relative size. The University of Arkansas Pine Bluff, Arkansas Tech University and the University of Arkansas at Monticello all expect to prepare somewhat more elementary teachers in 1978 than in 1977.

Male Elementary Teachers

The number of male elementary teachers produced, never very large, is expected to decrease 41.8% from 1977 to 1978, not including data from Henderson State University. Table 4 gives the number of male elementary teachers prepared by each Arkansas institution, with the institution ranked by number of teachers produced in each of the two years.

The University of Central Arkansas prepared an extraordinary number of male elementary teachers in 1977, but estimated a more typical number for 1978. The University of Arkansas, Arkansas Tech University, and the University of Arkansas at Little Rock were the only institutions that expected to produce more male elementary teachers in 1978 than they did in 1977.

Female Elementary Teachers

The number of female elementary teachers produced is expected to increase 5.8%, not including data from Henderson State University, the only increase expected. Table 5 gives the number of female elementary teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

	Total	678		Total	639

The University of Central Arkansas, Arkansas State University, and the University of Arkansas are the state's largest producers of

female elementary teachers. The University of Arkansas at Monticello expects to move up appreciably in the rankings for 1978. The University of Central Arkansas, Arkansas Tech University, the University of Arkansas at Monticello, and the University of Arkansas at Pine Bluff all estimate that they will produce appreciably larger numbers of female elementary teachers in 1978 than in the previous year.

Total Number of Secondary Teachers

The number of secondary teachers prepared is estimated to decrease 8.7%, disregarding data from Henderson State University. Table 6 gives the total number of secondary teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

The University of Arkansas is the state's largest producer of secondary teachers. The University of Central Arkansas, the University of Arkansas at Pine Bluff, the University of Arkansas at Little Rock, and Arkansas College expect to produce appreciably more secondary teachers in 1978 than they did the year before. The University of Arkansas at Pine Bluff and the University of Arkansas at Little Rock both expect to move up several places in the rankings.

Male Secondary Teachers

The number of male secondary teachers prepared is estimated to decrease 11.3%, disregarding data from Henderson State University. Table 7 gives the total number of male secondary teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

The University of Arkansas is the state's largest producer of male secondary teachers. The University of Central Arkansas and the University of Arkansas at Pine Bluff expect to produce appreciably more male secondary teachers in 1978 than they did the year before. Harding (down), University of Central Arkansas, Arkansas Tech University, and the University of Arkansas Pine Bluff all expect to change by several positions in the rankings.

Female Secondary Teachers

The number of female secondary teachers prepared is estimated to decrease 6.8%, disregarding data from Henderson State University. Table 8 gives the total number of female secondary teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

The University of Arkansas is the state's largest producer of female secondary teachers. The University of Central Arkansas, the University of Arkansas at Little Rock, Southern Arkansas University, Arkansas College and Philander Smith College all expect to produce appreciably more female secondary teachers in 1978 than they did the year before. The University of Arkansas at Little Rock, Southern Arkansas University, and Philander Smith College all expect to move up several positions in relative standing.

Total Special Education Teachers

The number of special education teachers prepared is estimated to decrease 38.4%, disregarding data from Henderson State University. Table 9 gives the total number of special education teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

Table 9.

Arkansas State University is the state's largest producer of special education teachers. Only Southern Arkansas University expects to produce more special education teachers in 1978 than it did in 1977. The University of Central Arkansas (down) is the only institution that expects to have any appreciable change in the rankings.

Male Special Education Teachers

The number of male special education teachers prepared is estimated to decrease 60.6%, disregarding data from Henderson State University. Table 10 gives the total number of male special education teachers prepared by each Arkansas institution, with the institutions ranked by number of teachers produced in each of the two years.

The University of Arkansas and the University of Arkansas at Pine Bluff both expect to produce a few more male special education teachers in 1978 than they did in 1977. The University of Central Arkansas expects a substantial decrease in the number produced.

Female Special Education Teachers

The number of female special education teachers prepared is estimated to decrease 34.9%, disregarding data from Henderson State University. Table 11 gives the total number of female special education teachers prepared by each Arkansas institution, with the institutions ranked by the number of teachers produced in each of the two years.

9.	SAU	1			
	Total	214		Total	138

Arkansas State University, the University of Arkansas at Pine Bluff, and the University of Arkansas are the state's largest producers of female special education teachers. Only Southern Arkansas University expects to prepare more female special education teachers in 1978 than it did in 1977. The rankings of the institutions are expected to remain substantially the same for the two years.

Summary

Although all the categories of teachers with the exception of female elementary teachers are expected to show some decrease from 1977 to 1978, some categories are expected to decrease much more than others. This may be seen in Table 12 below.

Table 12.
Per Cent Change by Category,
1977 to 1978 (Est.)

<u>Category</u>	<u>Change</u>
Female Elementary	+ 5.8%
Total Elementary	- 0.4%
Female Secondary	- 6.8%
Total Secondary	- 8.7%
Total Number of Teachers	- 9.4%
Male Secondary	-11.3%
Female Special Education	-34.9%
Total Special Education	-38.4%
Male Elementary	-41.8%
Male Special Education	-60.6%

Public Institutions

1. Arkansas State University. ASU tended to rank about second among the institutions for the 1977 data, leading the state in the production of female elementary teachers, female special education teachers, and in the total number of special education teachers. In no instance was it below third in rank for any of the categories.

However, for the estimated 1978 data, ASU tended to rank a bit lower. The institution still expects to lead the state in the production of special education teachers and in female special education teachers, but it is expected to slip to eighth in the production of male elementary teachers in 1978.

2. Arkansas Tech University. ATU ranked from seventh to ninth on the 1977 data, and it tends to rank a bit higher on the estimated 1978 data. ATU expects to lead the state in the estimated production of male elementary teachers for 1978.

3. Henderson State University. HSU tended to rank about fifth among the institutions on the 1977 data, and it was the third largest producer of secondary teachers. As previously indicated, estimated 1978 data were not available.

4. Southern Arkansas University. SAU tends to rank about ninth in size on the various rankings on both the 1977 and estimated 1978 data. The 1978 estimated data indicate that the institution will move from eleventh to eighth in the production of female secondary teachers.

5. University of Arkansas. UA is the state's largest teacher education institution, and the institution led the state in 1977 in not only the total number of teachers produced, but in the production of male secondary teachers, female secondary teachers, and total secondary teachers. The 1978 estimated data indicate that UA will again lead the state in the same categories, as well as in the production

of male special education teachers. The institution expects to move in 1978 from seventh to second in the production of male elementary teachers and from the bottom to the top in the production of male special education teachers.

6. University of Arkansas at Little Rock. UALR tended to rank about ninth in size on the various rankings on the 1977 data and about seventh in size on the various rankings on the estimated 1978 data. The institution is expected to move from a rank of 11.5 to fifth in the production of male elementary teachers and from eleventh to seventh in the total production of secondary teachers.

7. University of Arkansas at Monticello. UAM tended to rank higher on the estimated 1978 data than on the 1977 data. The institution expects to move from tenth to seventh in the production of female elementary teachers.

8. University of Arkansas at Pine Bluff. UAPB also tended to rank higher on the estimated 1978 data than on the 1977 data. It expects to move from seventh to fourth in the total number of teachers produced and to make substantial relative moves up in the categories of male secondary teachers and total number of secondary teachers. However, the relative number of male elementary teachers will decrease at UAPB. The institution expects in 1978 to be the second largest producer of special education teachers, including second in both male special education teachers and female special education teachers.

9. University of Central Arkansas. UCA tends to rank between second and third on both the 1977 and the estimated 1978 rankings and it expects to be the state's second largest producer of teachers in 1978. UCA led the state in 1977 in the production of male elementary teachers, total number of elementary teachers, and in male special education teachers. It expects to lead the state in 1978 in the number of female elementary teachers and the total number of elementary teachers. The institution's relative position with respect to male secondary teachers is expected to increase, but the relative position with respect to male elementary teachers, male special education teachers, and the total number of special education teachers is expected to decrease.

Non-Public Institutions

1. Arkansas College. AC tends to rank higher in the 1978 estimated data than it did for the 1977 data. The institution, for example, expects to move from sixteenth to eighth in the production of male elementary teachers in 1978.

2. The College of the Ozarks. C of O tends to rank a bit higher in the 1978 estimated data than it did for the 1977 data. This is partly due to a move from fourteenth to eighth in the production of male elementary teachers in 1978.

3. Harding College. In 1977 Harding was the fifth largest producer of teachers in the state, and the largest producer of teachers

among the non-public institutions. In 1977 it was the fourth largest producer of male secondary teachers, and in 1978 it expects to be the fourth largest producer of male special education teachers and of total special education teachers. In all these instances, Harding is expected to lead the state among the non-public institutions.

4. Hendrix College. Hendrix is expected to generally stay in the same relative position among the institutions in 1978 as it was in 1977.

5. John Brown University. JBU will generally stay in the same relative position among the institutions in 1978 as it was in 1977.

6. Ouachita Baptist University. OBU will generally be a bit higher in the estimated 1978 rankings than it was in the 1977 rankings. According to the estimated 1978 data, OBU will rank fifth in the state in the total production of teachers and it will be the largest producer of teachers among the non-public institutions. In 1977 OBU ranked second in the state in the production of male elementary teachers and it expects to be third in the state in this category in 1978. In 1978 OBU expects to be the fourth largest producer of female elementary teachers and total elementary teachers.

7. Philander Smith College. Although PS is the state's smallest producer of teachers, in 1977 it ranked second among all institutions in the production of male special education teachers, and sixth in the production of female special education teachers and the total number of special education teachers. It expects to continue to rank relatively high among the institutions in the production of special education teachers in 1978.
